

Pro Bono IT Security Assessment

Cloud Solution IT is a purpose-built MSP-MSSP for small-mid-sized companies that depend on IT.

Description of the Assessment

The CSIT Security Assessment is designed for IT Departments that want a qualitative assessment of their IT security preparedness and gain a holistic 3rd-party expert opinion on areas of strength, vulnerabilities, and risk assessment. This assessment is non-invasive and does not require transfer of system access permissions.

01 Consultation Call | Technical Environment

In this 20 to 30-minute call, our IT Security subject matter experts will interview you and ask questions about the firm's general technical security profile.

02 Security Questionnaire | Policies, Procedures

This is an online or personal-interview questionnaire that documents the policies, procedures, and IT security culture of the company.

03 Dark Web Search | Physical Check

We will run a pro bono Dark Web Search that will seek out and catalog exploits including compromised passwords and emails associated with your IT systems.

04 IT-Management Security Assessment Report

A management-grade IT Security Risk Assessment Report is created. Recommendations for key areas of focus will be made. Remediation options including SECaaS solutions are discussed.

Areas of focus

- ✓ Cloud Environment
- ✓ Data Security
- ✓ Network Security
- ✓ Microsoft Security
- ✓ Email Security
- ✓ Dark Web
- ✓ Policies & Procedures
